SUMMARY

DevOps Engineer with hands-on experience in **AWS, Kubernetes (EKS), Docker, CI/CD, Jenkins, Terraform, Python, Linux and DevSecOps**, with practical exposure to cloud infrastructure, Infrastructure as Code, GitOps, containerization, secure networking, observability and automation. Experienced in building deployment pipelines, managing multi-environment releases, integrating security and quality checks, and supporting reliable cloud-native application delivery.

PROFESSIONAL EXPERIENCE

DevOps Intern — Maksha

Bengaluru, India | Jul 2026 – Present

- Contributed to re-architecting backend workloads from standalone EC2 servers to containerized microservices on Docker and AWS EKS, with databases migrated to AWS RDS to improve scalability and manageability.
- Developed Jenkins CI/CD pipelines for multi-environment Kubernetes deployments, enabling consistent namespace-based releases across production and non-production clusters.
- Implemented Terraform-based Infrastructure as Code (IaC) to provision and manage AWS resources, including EKS-managed nodes and supporting servers, across environments.
- Configured site-to-site VPN connectivity between on-premises infrastructure and AWS VPC; worked with ALB, NAT, Security Groups, DNS, TCP/IP, HTTP/HTTPS and TLS.
- Contributed to an AWS data platform using Lambda, S3, Glue and Redshift, and implemented Prometheus/Grafana monitoring and automation scripts for proactive anomaly detection and alerting.

DevOps Intern — Train With Shubham (TWS)

Pune, India | Jan 2026 – Jun 2026

Cloud-Native E-Commerce Deployment & CI/CD Automation | AWS EKS, Docker, Kubernetes, Jenkins, Terraform, SonarQube, Trivy, Prometheus, Grafana

- Built and deployed a three-tier web application on AWS EKS, containerizing application components with Docker and configuring Kubernetes Deployments, Services, Namespaces and Ingress for environment-specific application delivery.
- Implemented Jenkins CI/CD pipelines for automated build, test and deployment workflows, using Terraform to provision AWS infrastructure and standardize repeatable deployments across environments.
- Integrated SonarQube and Trivy into the delivery pipeline for code-quality and container-security scanning, improving DevSecOps coverage before deployment.
- Configured Prometheus and Grafana for application and Kubernetes monitoring, enabling proactive detection of resource and deployment issues.
- Worked with AWS VPC, EC2, EKS, ECR, IAM, Security Groups and CloudWatch for cloud infrastructure, networking and operational troubleshooting.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, EKS, ECR, RDS, Lambda, S3, VPC, IAM, CloudWatch)

CI/CD & Automation: Jenkins, GitHub Actions, Git, GitHub, Ansible, Bash/Shell

Containers & Kubernetes: Docker, Kubernetes, EKS, Helm, Argo CD, Istio, kubectl

Infrastructure as Code: Terraform, AWS CloudFormation

DevSecOps & Security: SonarQube, Trivy, OWASP, SAST, Container Security

Observability: Prometheus, Grafana, Nagios, Fluent Bit, OpenSearch, Splunk, CloudWatch

Networking: TCP/IP, DNS, SMTP, HTTP/HTTPS, TLS, ALB, NAT, Security Groups, Nginx

Programming & Data: Python, Java, MongoDB, Oracle RDS, Redis

Operating Systems & Tools: Linux, RHEL, Windows, curl, wget, apt

AI-Assisted DevOps: Claude Code, AI-assisted development

PROJECTS

Wanderlust — Kubernetes DevSecOps Deployment | AWS EKS, Docker, Kubernetes, Jenkins, Helm, Argo CD

- Containerized and deployed the application on AWS EKS using Docker, Kubernetes and Helm, with Jenkins-based CI/CD and Argo CD for GitOps-driven releases.
- Integrated monitoring and security/quality checks into the delivery workflow to improve release visibility, consistency and reliability.

PulseURL — Secure Event-Driven URL Platform | FastAPI, React, PostgreSQL, Temporal, Docker Compose

- Engineered a full-stack URL-shortening platform with FastAPI, React, PostgreSQL and Docker Compose, using self-hosted Temporal for asynchronous workflows.
- Implemented durable click tracking and scheduled URL-safety checks with SSRF protection and IP-based rate limiting; achieved 57 passing tests and 82% test coverage.

Real-Time Chat Application | React, Node.js, Express, MongoDB, Socket.IO, Docker, Git

- Developed a real-time chat application using Socket.IO for instant messaging, with persistent data storage and a full-stack architecture focused on responsive communication.
- Containerized the application and applied Git-based development practices to support reproducible setup and deployment-ready environments.

EDUCATION

BMS College of Engineering (BMSCE) — Bengaluru, India | B.E. in Civil Engineering | 2018 — 2023 | **CGPA: 7.42/10**

CERTIFICATIONS & ACHIEVEMENTS

- AWS Zero To Hero — Cloud/DevOps learning certification by Train With Shubham
- Cloud Computing — Certification by TuteDude
- Python for DevOps — Certification
- Water Conservation by Rain Water Harvesting — International Journal of Advance Research and Innovative Ideas in Education (IJARIIE)
- Web Development for Coders Workshop — BMSCE PhaseShift

LANGUAGES & INTERESTS

Languages: English (Fluent), Hindi (Native)

Interests: Badminton, Reading
